Integrate GAP Portal into your solution today...

How is the GAP Portal used today?

Helping businesses to satisfy duty of care obligations and safety legislation

Managing and optimising assets in remote, rural and urban environments

Protecting lone workers and travellers globally in complex and challenging environments

Managing journeys, vehicles and driver behaviour

Monitoring vessels, maritime equipment and people at sea

Tracking aircraft, airport assets, flights and business travel

ALL IN ONE PLACE

With the GAP Portal you have everything you need to monitor your entire network of people and things. Its intuitive user interface, quick search tools and rules engine makes it easy to navigate, visualise and manage your assets in real-time. Through one system, you can communicate with people and assets using a wide-range of notification channels and message protocols from SMS and email through to voice.

PRIVACY BY DESIGN

The GAP Portal allows you to manage even the most complex organisational structures, data protection requirements and permission hierarchies. Strict segmentation of data is applied to all classes and components, allowing you and your customers to organise the system into cohesive elements and responsibilities. Delegated administration can be achieved using a number of core GAP components such as Tenants, Groups, Roles & Collections.

POWERFUL AUTOMATION

The GAP Portal makes it easy for you to automate time-sensitive actions and notifications based on specific criteria and operational objectives. Our powerful Event Engine allows you to manage and optimise all of your devices and users with minimal manual intervention. You can set up rules to automate the management of any type of device or user, simply and efficiently.
